AQUAQUIP

Flow Control Timer

simply set and forget to avoid the risk of costly repairs

Supplied complete with integrated flow switch.

Aqua-Quip Timer Control Centre is designed to give you complete automatic control of your booster-driven pool cleaning system.

The in-built delay timer provides power to the booster pump for a user-specified amount of time, 30 seconds after constant water flow is detected in the pipework. When water flow stops or is significantly reduced, the integrated flow switch shuts down the booster pump and will only re-start when water flow resumes.

The Aqua-Quip Flow Control Timer eliminates the possibility of the booster pump running dry of water as a result of incorrect synchronisation with the pool pump.

Reduces wear and tear on the pool cleaner and saves expensive pump repairs.

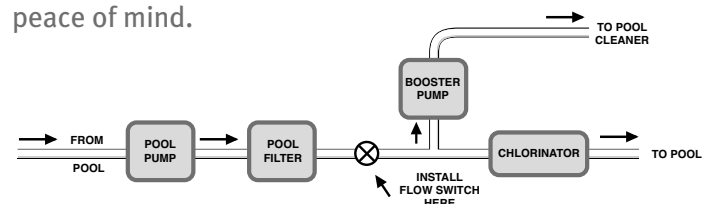

Saves power consumption by limiting the operating hours of the booster pump.

The Aqua-Quip Flow Control Timer can be used for a variety of applications where water flow is required to switch on an auxiliary electrical device.

The Aqua-Quip Flow Control Timer with its integrated flow switch is significantly more reliable and much simpler than installing two separate time clocks.

Latest technology provides better pump protection and resolves all the problems with earlier generation models.

Aqua-Quip's 2 year warranty provides the user ultimate peace of mind.

Flow Control Timer also suits Pool/Spa combinations.
