

- The impeller stack is of a floating design, so that individual impellers can move vertically to allow small solids to pass through, rather than locking up the pump
- Large hexagonal shaft transmits power without wear or flex
- Heavy gauge outer shell makes it strong, rigid and long lasting
- Superior ceramic wear surface reduces problems running in sandy or abrasive water
- Floating impeller design reduces sand lock up problems and ensures a longer motor life and trouble free operation

Applications:

- Residential, irrigation, water transfer and stock watering.
