

Quality Pool & Spa Products

ONGA CHLORMASTER

Code	Description
CM20	Chlorinator Chlormaster 20
CM30	Chlorinator Chlormaster 30

**Warranty - 2 year Power Supply
- 3 year Pro Rata Cell**

FEATURES

You can feel the difference.

Imagine sparkling, clear water in your pool or spa that actually feels soft and clean on your skin and does not irritate your eyes or smell of chlorine. Imagine that you can do all this without having to dose your pool with often messy, smelly and expensive chlorine tablets, granules or liquid. And imagine a saltwater chlorinator that uses advanced technology to make the whole process foolproof and virtually automatic. The Chlormaster series stands apart from other chlorinators for features and reliability. And because it's from Onga you know service and advice are only ever a phone call away. Install a Chlormaster chlorinator in your new pool or convert your existing pool today.

Imitating nature.

The Chlormaster passes salt water through an electrode to form chlorine naturally. So all you need to do is occasionally add harmless salt to your pool in about the same concentration as a teardrop – or one-seventh the concentration of salt in the sea. The electrode is self-cleaning and the system incorporates the latest technology using 40 per cent less electricity than a standard saltwater chlorinator. Automatic cut-offs and warning devices are built into the system to ensure absolute peace of mind.

More for less.

The latest innovation in power supply design reduces power consumption by up to 40 per cent compared to standard salt-water chlorinators. Chlormaster uses reverse polarity technology to keep your chlorinator cell clean and working to maximum efficiency at all times to provide a 90 per cent saving in maintenance over standard chlorinators.

- Automatic overload protects power supply from High Salt.
- Automatic low salt alarm if salt falls below optimum threshold
- Timer for control of pump and chlorinator.
- Battery back up.
- Easy to use single plug connection for power pack to cell.
- Fully automatic self-cleaning cell by reverse polarity.
- Solid plate industrial grade titanium electrodes.
- Australia's most efficient and accessible cell.
- Easy to read chlorine production level indicator
- Easy to read, single press button pads increase or decrease chlorine production in unit increments.
- Enclosed cell housing protecting plate edges for longer cell life.
- LED's show you the status of each function.
- Computerised automatic control and display system.
- Optimum flow for increased efficiency and chlorine production.
- Electronic sensing switch.
- Variable chlorine output control.
- Circuit breaker overload protection.
- Low electrical consumption (up to 40 per cent).

- Highly efficient electrical design. Cheaper to run.
- Added functionality with high salt / low salt indicator
- Pre-plumbed multiple cell configurations with built in automatic acid wash facility available for commercial applications

Simple and safe.

The Chlormaster consists of a cell, which is protected from accidental damage by a housing that encloses the plates completely, and a lightweight power supply, which you simply mount on a nearby wall. The system is equipped with a battery back up timer as standard, making it a true set and forget system. The system features automatic shut off to both pump and cell to avoid overloading. An audible alarm sounds the alert if no chlorine is being produced. With only two buttons for adjustment, this is one of the easiest units to operate. Using the latest technology available the Chlormaster Cell will self clean and operate at maximum efficiency for a fresh sparkling pool.

	CM20	CM30
Maximum working pressure	480 kPa	480kPa
Water temperature range	5° -35°C	5° -35°C
Maximum ambient temperature	55°	55°
IP rating	IP24	IP24
Cool climate pool volume*	Q031143	Q031143
Hot climate pool volume	80,000 Litres	145,000 Litres
Main volts 50hz 10A	60,000 Litres	80,000 Litres
Power output (maximum 10A)	230V AC	230V AC
Volts output	200VA	260VA
Current output (maximum)	7.0V DC	7.0V DC
Pump voltage	230V AC 50HZ	230V AC 50HZ
Salt level	5000 ppm	5000 ppm
Flow rate max (LPM)	450	450
Chlorine output (Grams/Hr)	22gm/hr	33gm/hr
Cell material	Grade 1 Titanium	Grade 1 Titanium

**Chlormaster models available for larger pools. Please ask. Comes ready to install into existing pipe work.*

Warranty:

The Chlormaster comes with a two year warranty on the power supply plus an extra 24 months pro-rata warranty on the cell. All commercial applications carry a 12 month warranty on both power supply cell electrodes.
