

Average rainfall statistics show. In large areas of Australia, pools fitted with an **Ecoskim** should not need to be topped up with town water at all!

How much water does an **Ecoskim** actually save?

The average calculated water savings in Brisbane and Sydney were 26,750L per pool, per year in 2009, with no other water saving devices fitted.

These figures were derived from actual Bureau of Meteorology data and **Ecoskim** has been sanctioned by Smart Approved Watermark.

“Necessity is the Mother of Invention”

Our world is changing. Weather patterns are becoming unpredictable due to global warming. It is becoming more obvious that our rainfall can no longer be relied on. Clean drinking water is now far too precious to be needlessly squandered

Ecoskim was invented, developed and produced in South East Queensland in direct response to prolonged water shortages experienced due to drought. This simple idea has evolved into a convenient sustainable solution to a problem that the standard skimmer has not addressed for decades.

Enjoy your pool guilt-free, the drought friendly way

- **Ecoskim** will either eliminate or greatly reduce the amount of water used by swimming pools.
- **Ecoskim** helps pool owners reduce expensive water fees.
- **Ecoskim** provides a far more efficient skimming action which helps keep your pool crystal clear.
- **Ecoskim** can be used simultaneously with pool floor suction cleaning devices.
- **Ecoskim** Will by operate for much longer periods without requiring attention giving greater flexibility when on holiday or busy.

Ecoskim will easily attach to most existing skimmer boxes to enhance operation and reduce maintenance. Its streamlined, visually appealing design allows it to snugly fit under the pool's coping(or overhang)with minimal intrusion into the swimming area.

Quality Counts

Ecoskim is proudly produced in Australia, by Australians, for Australian conditions.

Ecoskim is made from the highest quality UV stable engineering plastics available and will provide years of trouble free service and savings for pool owners everywhere.

How does **Ecoskim** work?

Ecoskim is connected via a flexible hose directly into the bottom of the existing skimmer box. It has a floating, self-adjusting mouth which will continue to operate down to 350 mm below the coping. This allows much longer periods between top-ups. To date, **Ecoskim** has provided up to 4 years without the need for town water top-up.

As the water is drawn into the device the floating mouth removes only the very surface of the water which provides a dramatically improved skimming action.

This action removes surface debris far more quickly than a standard skimmer.
