SPECIFICATIONS

BCN03 Starting Platform

The BCN03 Starting block, developed and patented by AstralPool for the Swimming World Championships held in Barcelona in 2003, introduces two innovations:
- allows the swimmer to adjust the angle of the platform* manually. They can choose the angle most suitable from the available 0º, 3º, 6º and 10º.
*The regulations of the International Swimming Federation (FINA) (FR2.7) allow an angle of between 0 and 10º on the starting platform. So far, all the starting blocks available in the market have consisted of a fixed unajustable platform.
- adjustable side handles.

The starting block is manufactured using AISI-316 Stainless Steel. The standard starting platform can be dismantled to enable assembly of the Omega electronic timing system. It can also be adapted to other timing systems to order. The platform is 550 mm long x 500 mm wide, with a polished finish, and 437 mm high. Ideal for installation in a swimming pool with side walls. Anchoring for installation in concrete is also included.

	Product Code	Standard Packing	Standard Weight	Standard Volume
BCN03 Podium manual adjustment and Fixed side rails	**28761**	1	-	-
Fixed BCN03 Eco Podium, no Side rails	**28760**	1	-	-
Fixed BCN03 Eco Podium, with Fixed side rails	**32700**	1	-	-

Note: Eco versions are fixed at 6°
