

COMMERCIAL POOL ACCESSORIES - BACKSTROKE POST

Model BP/BPB Backstroke Turn Indicator Post

Code	Description
PDA794	BACKSTROKE TURN INDICATOR POST (STANDARD)
PDA795	BACKSTROKE INDICATOR POST WITH BAYONET LOCKING BASE

SPECIFICATIONS

Model BP/BPB Backstroke Turn Indicator Post

Backstroke turn indicator posts should be installed 5 metres from each end of the pool and backstroke flags should be 1.8 metres to 2.5 metres above the water. The posts slide into post sockets that are core drilled and glued into the concourse / coping.

Standard: An eyelet is welded to the post allow the backstroke flag to attach. The standard post is the popular choice. Uses the PS Post Socket.

Bayonet Locking Base: An eyelet is welded to the post allow the backstroke flag to attach. The bayonet locking base requires the use of the PSB Post Socket. A pin is located inside the socket. When inserting the post you will need to twist the post until it locks into position.

Material: Stainless Steel 38 mm \varnothing mirror finish
