SPECIFICATIONS

Model FP/FPQ/FPB/FPBQ False Start Post

False Start Posts: False start post allow you to stop a race if a false start occurs easily by dropping a rope in front of the swimmer preventing them from continuing the race. The posts slide into post sockets that are core drilled and glued into the concourse / coping.

Standard: An eyelet is welded to the post allowing the false start rope to attach. Uses PS Post Socket.

Quick Release Cam: The quick release cam holds the rope in position until it is pulled allowing it to drop. Uses PS Post Socket.

Bayonet Locking Base: An eyelet is welded to the post allowing the false start rope to attach. The quick release cam holds the rope in position until it is pulled allowing it to drop. The bayonet locking base requires the use of the PSB Post Socket. A pin is located inside the socket. When inserting the post you will need to twist the post until it locks into position.

Material: Stainless Steel 38 mmØ mirror finish
