SPECIFICATIONS

Model PS/PSB Post Socket

Post Socket: The post sockets are used for backstroke turn indicator posts and false start posts. The posts slide into post sockets that are core drilled and glued into the concourse / coping.

PS Post Socket: This is the most popular choice. This socket is suitable for BP backstroke posts, FP and FPQ false start posts. Earthing screw provided.

PSB Post Sockets with bayonet locking base: A pin is located inside the socket. When inserting the post you will need to twist the post until it locks into position. This socket is suitable for BPB backstroke posts, FPB and FPBQ false start posts. Earthing screw provided.

Material: Stainless steel mirror polished

Size: 100 mm x 40 mm \varnothing (H x W)

Top dia: 60 mm
